AI Transformation Short – Task Distribution

Team Lead: Hafsa Javed

Total Team Members: 9

Start Date: 27 March

Final Deadline: 2 weeks

Group 1: Image Generation (2 Members)

Member 1 (Afia Noor) : Anchor Frame Generator

Task	Generate final clean/renovated anchor images for all 9 videos
How Many	9 anchor frame images

Step-by-Step Instructions:

1. Choose 9 different abandoned interior spaces to renovate:
    - Video 1: Abandoned living room → Renovated modern living room
    - Video 2: Abandoned bedroom → Renovated modern bedroom
    - Video 3: Abandoned kitchen → Renovated modern kitchen
    - Video 4: Abandoned bathroom → Renovated modern bathroom
    - Video 5: Abandoned dining room → Renovated modern dining room
    - Video 6: Abandoned home office → Renovated modern office
    - Video 7: Abandoned studio → Renovated modern studio
    - Video 8: Abandoned basement → Renovated modern basement
    - Video 9: Abandoned attic → Renovated modern attic
2. Open Leonardo AI, Bing Image Creator, or Mage.space (SDXL) (or do your own research for any better options)

3. Set aspect ratio to 9:16 (vertical)
4. Write detailed prompt for clean version: for example

"Realistic photo of a renovated modern [room type], white walls, light oak flooring, modern furniture, large window on left wall with natural sunlight streaming in, eye-level camera angle, ultra realistic, 8k, vertical 9:16, no people"

5. Generate 3–4 variations per video, select most realistic
6. Ensure:
    - No human faces
    - Realistic textures
    - Consistent lighting from left
    - Vertical orientation
7. Save as PNG: Video_01_anchor.png, Video_02_anchor.png, etc.
8. Upload to shared folder

Deliverables:

- 9 anchor frame images (PNG, 1080x1920)
- List of prompts used for each anchor

<u>Member 2 (Abdul Jabbar) : Dirty Version Generator</u>

Task	Generate abandoned/pre-renovation version matching each anchor frame exactly
How Many	9 dirty version images

Step-by-Step Instructions:

1. Open each anchor frame created by Member 1
2. Use same tool with image-to-image feature
3. Write prompt maintaining exact layout: For example

"Same exact [room type], same camera angle, but abandoned and ruined. Dust everywhere, cobwebs in corners, cracked walls, broken furniture, torn curtains, trash on floor, graffiti on walls, realistic photo, ultra detailed, 8k"

4. Compare side-by-side with anchor frame - verify:
    - Same camera angle
    - Same furniture position
    - Same window placement
    - Same lighting direction
5. If layout changes → regenerate immediately
6. Save as PNG: Video_01_dirty.png, Video_02_dirty.png, etc.
7. Upload to shared folder

Deliverables:

- 9 dirty version images (PNG, matching anchors exactly)
- List of prompts used for each dirty version

<u>Group 2: Video Generation (2 Members)</u>

Workload Split: Member 3 generates 4 videos, Member 4 generates 5 videos
Each member generates 3–4 short clips (3–5 seconds each) per video as per PDF.

<u>Member 3 (M. Zaheer) : Video Generation (Videos 1–4)</u>

Task	Generate 3–4 short transformation clips for Videos 1, 2, 3, 4
How Many	4 videos × 3–4 clips = 12–16 clips total

Step-by-Step Instructions:

1. Open Luma Dream Machine or Pika (or do your own research for any better options)
2. For each video (1–4), upload the dirty version image as starting frame

3. Use image-to-video feature
4. Write prompt for slow, realistic renovation: for example

"Slowly renovating the abandoned [room type], dust clearing, walls becoming clean, new furniture appearing, subtle movement, realistic, tripod shot, fixed camera, no fast morphing, no human faces"

5. Generate 3–4 clips per video showing progression:
    - Clip 1: Beginning (dust starting to clear, debris disappearing)
    - Clip 2: Middle stage (walls repaired, half renovated)
    - Clip 3: Almost finished (minor details remaining)
    - Clip 4 (optional): Final touches before reveal
6. Export each clip as MP4 (3–5 seconds)
7. Name clips: Video_01_clip_01.mp4, Video_01_clip_02.mp4, etc.
8. Upload to shared folder

Deliverables:

- 12–16 video clips for Videos 1–4
- List of prompts used for each clip

<u>Member 4 (Hafsa Javed) : Video Generation (Videos 5–9)</u>

Task	Generate 3–4 short transformation clips for Videos 5, 6, 7, 8, 9
How Many	5 videos × 3–4 clips = 15–20 clips total

Step-by-Step Instructions:

1. Open Luma Dream Machine or Pika (or do your own research for any better options)
2. For each video (5–9), upload the dirty version image as starting frame
3. Use image-to-video feature
4. Write prompt for slow, realistic renovation: For example

"Slowly renovating the abandoned [room type], dust clearing, walls becoming clean, new furniture appearing, subtle movement, realistic, tripod shot, fixed camera, no fast morphing, no human faces"

5. Generate 3–4 clips per video showing progression:
    - Clip 1: Beginning (dust starting to clear, debris disappearing)
    - Clip 2: Middle stage (walls repaired, half renovated)
    - Clip 3: Almost finished (minor details remaining)
    - Clip 4 (optional): Final touches before reveal
6. Export each clip as MP4 (3–5 seconds)
7. Name clips: Video_05_clip_01.mp4, Video_05_clip_02.mp4, etc.
8. Upload to shared folder

Deliverables:

- 15–20 video clips for Videos 5–9
- List of prompts used for each clip

<u>Group 3: Video Editing & Color Correction (3 Members)</u>

Workload Split: Member 5 edits 3 videos, Member 6 edits 3 videos, Member 7 edits 3 videos
Each member handles structure, pacing, smooth cuts, AND color correction for their assigned videos.

<u>Member 5 (Faraz Khan): Editor (Videos 1, 2, 3)</u>

Task	Edit Videos 1, 2, 3 into 45–60 seconds with smooth cuts, proper pacing, and light color correction
How Many	3 videos

Step-by-Step Instructions:

1. Open CapCut, VN Editor, or Shotcut
2. For each video (1–3) , import clips from Group 2 folder
3. Arrange timeline according to PDF structure:

Time	Content	Source
0–5 sec	Show abandoned version clearly	Use dirty version image (static) or first clip
5–30 sec	Show renovation progression	Arrange clip 1, 2, 3 in sequence
30–50 sec	Nearly finished stage	Use last clip
Final sec	Smooth reveal of final renovated version	Use Anchor Frame image

4. Add smooth cuts between clips - no harsh jumps
5. Adjust timing to ensure 45–60 seconds total
6. Apply light color correction:
    - Adjust brightness/contrast slightly
    - Ensure clips have matching color tone
    - No heavy filters - maintain realistic look
    - White balance consistent across clips
7. Optional: Add before/after split comparison
8. Export final edited video
9. Name files: Video_01_final_edit.mp4, Video_02_final_edit.mp4, Video_03_final_edit.mp4

Deliverables:

- 3 final edited videos (MP4, 45–60 seconds, color corrected)

<u>Member 6 (Eman Afzal) : Editor (Videos 4, 5, 6)</u>

Task	Edit Videos 4, 5, 6 into 45–60 seconds with smooth cuts, proper pacing, and light color correction
How Many	3 videos

Step-by-Step Instructions:

1. Open CapCut, VN Editor, or Shotcut
2. For Video 4, import clips from Member 3's folder
3. For Videos 5–6, import clips from Member 4's folder
4. Arrange timeline according to PDF structure:

Time	Content	Source
0–5 sec	Show abandoned version clearly	Use dirty version image
5–30 sec	Show renovation progression	Arrange clip 1, 2, 3 in sequence
30–50 sec	Nearly finished stage	Use last clip
Final sec	Smooth reveal of final renovated version	Use Anchor Frame image

5. Add smooth cuts between clips - no harsh jumps
6. Adjust timing to ensure 45–60 seconds total
7. Apply light color correction:
    - Adjust brightness/contrast slightly
    - Ensure clips have matching color tone
    - No heavy filters - maintain realistic look
    - White balance consistent across clips
8. Optional: Add before/after split comparison
9. Export final edited video

10. Name files: Video_04_final_edit.mp4, Video_05_final_edit.mp4, Video_06_final_edit.mp4

Deliverables:

- 3 final edited videos (MP4, 45–60 seconds, color corrected)

Member 7 (Ghazal Hafeez): Editor (Videos 7, 8, 9)

Task	Edit Videos 7, 8, 9 into 45–60 seconds with smooth cuts, proper pacing, and light color correction
How Many	3 videos

Step-by-Step Instructions:

1. Open CapCut, VN Editor, or Shotcut
2. For Videos 7–9, import clips from Member 4's folder
3. Arrange timeline according to PDF structure:

Time	Content	Source
0–5 sec	Show abandoned version clearly	Use dirty version image (static) or first clip
5–30 sec	Show renovation progression	Arrange clip 1, 2, 3 in sequence
30–50 sec	Nearly finished stage	Use last clip
Final sec	Smooth reveal of final renovated version	Use Anchor Frame Image

4. Add smooth cuts between clips - no harsh jumps
5. Adjust timing to ensure 45–60 seconds total
6. Apply light color correction:
    - Adjust brightness/contrast slightly

    - Ensure clips have matching color tone
    - No heavy filters - maintain realistic look
    - White balance consistent across clips
7. Optional: Add before/after split comparison
8. Export final edited video
9. Name files: Video_07_final_edit.mp4, Video_08_final_edit.mp4, Video_09_final_edit.mp4

Deliverables:

- 3 final edited videos (MP4, 45–60 seconds, color corrected)

Group 4: Sound Design, Quality Control, Export & Submission (2 Members)

Member 8 (Fiza Aslam) : Sound Designer (All 9 Videos)

Task	Add subtle background music and realistic sound effects to all 9 videos
How Many	All 9 videos

Step-by-Step Instructions:

1. Import final edited videos from Members 5, 6, 7
2. For each video, add subtle background music:
    - Use CapCut/VN Editor audio library or free royalty-free music
    - Choose calm, non-distracting instrumental music
    - Set volume low (background only, not overpowering)
3. Add realistic sound effects for abandoned interior renovation:
    - Dust clearing: gentle blowing, vacuum sounds
    - Debris removal: scraping, sweeping sounds

    - Wall repair: sanding, plastering sounds
    - New furniture: subtle creaking, placement sounds
    - Final reveal: ambient room tone, soft echo
4. Sync sound effects with on-screen movement
5. Ensure audio balance - music and sound effects don't compete
6. Export videos with sound
7. Name files: Video_01_withsound.mp4, Video_02_withsound.mp4, etc.

Deliverables:

- 9 videos with background music and sound effects (MP4)
- List of music tracks and sound effects used

<u>Member 9 (Eiman Zahra) : Quality Control Reviewer & Export & Submission (All 9 Videos)</u>

Task	Review all videos for glitches, approve/reject, export final versions, collect assets, prepare submission packages
How Many	All 9 videos reviewed, approved, exported, packaged

Part A: Quality Control Review (PDF Step 6)

Step-by-Step Instructions:

1. Watch each video multiple times:
    - On phone screen (check vertical 9:16 format)
    - On laptop screen (spot small glitches)
2. Use checklist for each video:

Check Item	Requirement
Duration	45–60 seconds
Resolution	1080x1920 vertical
Frame rate	24fps or 30fps (consistent)
Camera angle	Never changed (tripod feel)
Lighting	No sudden changes
Morphing	No fast unrealistic morphing
Human faces	No human faces visible
Glitches	No artifacts or distortions
Music	Subtle, not overpowering
Sound effects	Realistic and synced
Transformation	Smooth and realistic
Anchor frame match	Final scene matches anchor
Layout consistency	Furniture/walls don't shift

3. If issues found:
    - Note specific timestamp and issue
    - Send back to relevant member:
        - Clip issues → Member 3 or 4

        - Editing/color issues → Member 5, 6, or 7
        - Sound issues → Member 8
    - Wait for fixed version and review again
4. Mark video as approved only when all checks pass

Part B: Final Export & Submission (PDF Step 7)

Step-by-Step Instructions:

1. Take approved videos
2. Export final MP4 with correct settings:
    - Format: MP4
    - Resolution: 1080x1920 (vertical 9:16)
    - Frame rate: 24fps or 30fps (same for all videos)
    - Bitrate: High
    - Codec: H.264
    - Name file: Video_01_final.mp4, Video_02_final.mp4, etc.
3. Collect all required assets for each video:

Asset	Source
Final MP4 video	Export from Member 8's withsound file
Anchor frame image	Member 1
Dirty version image	Member 2
All prompts used	Members 1, 2, 3, 4
Tools used	Document from all members

4. Write 5-8 lines explaining workflow.

5. Create submission folder for each video:

text

```
Submission_Video_01/
├── final_video.mp4
├── anchor_frame.png
├── prompts.txt
├── tools_used.txt
└── workflow_summary.txt (5-8 lines each)
```

Deliverables:

- 9 final MP4 videos (resolution: minimium1080x1920, 45–60 seconds, 24/30fps (must stay consistent), format: vertical (9:16))
- 9 complete submission packages (each with 5 items)
